MARKETING EXECUTION PLAN

The Post-Practice Tradition

Duration 8 weeks (compressible to 6)

Goal Convert the sports-park audience already passing the door

Prepared for The owner of Simbongsa

1. The one-line strategy

Simbongsa isn't competing with other Korean restaurants — it's competing with families driving **straight home** after practice. The audience is already nearby, already hungry, and already has a reason to stop. **The job is conversion, not awareness.**

Everything below is built to turn "we drove past it" into "we always stop there after practice."

The three offers — the engine

Offer	What it is	Job it does
Practice Day Special	A small bonus item for guests in a sports uniform / practice attire	Builds the habit and rewards the exact moment we want to own
Family Bundles	Family-sized combinations priced as a set	Lifts average order value
First-Time Favorites	A "not sure what to get?" starter guide at the counter + online	Removes hesitation → converts first-timers

The three tracking codes — how we prove it worked

STORY

PRACTICE

CREATOR

Every offer and post carries one, so each real visit ties back to the marketing that drove it.
Likes don't equal sales; redeemed codes do.

2. Success metrics

Metric	Target by end of campaign
Peak-hour (post-practice) transactions	+15%
Average order value	+10%
Repeat visits	+15%
Marketing attribution	Every campaign traceable to redeemed codes

Leading indicators (watch weekly): code redemptions, bundle attach rate, % of transactions in the 4–7pm post-practice window, new-vs-returning mix, content saves/shares (not just likes).

3. Roles & tools

- **Owner / manager:** approves offers, briefs staff, reviews the weekly numbers.
- **Counter staff:** apply the Practice Day bonus, record the code at checkout, hand out First-Time Favorites cards.
- **Content lead:** shoots and posts content, runs the calendar, compiles the weekly report.
- **Tools:** POS with a coupon button per code (or a tally sheet), Instagram, a printed First-Time Favorites card, one shared log spreadsheet.

Zero-budget path: phone camera + Instagram + tally sheet + printed cards. Paid boosts are optional and only introduced once we know which posts convert (Week 5+).

4. Week 0 — Setup (the 3–5 days before launch)

Do not launch until these are done. This week is what makes the results *measurable*.

- ☐ Finalize the **Practice Day Special** bonus item (low-cost, high-perceived-value).
- ☐ Define the **3 launch Family Bundles** with set pricing and names.
- ☐ Write and print the **First-Time Favorites** card: "New here? Start with these 3." Pin it on Instagram too.
- ☐ Set up **tracking codes** in the POS (or tally sheet): STORY, PRACTICE, CREATOR.
- ☐ Create the **weekly log spreadsheet** (date, transactions, post-practice count, redemptions by code, bundles sold, new/returning).
- ☐ **Brief counter staff** on applying the bonus and logging the code.
- ☐ Shoot a **batch of 5–7 content pieces** so Week 1 isn't scrambling.
- ☐ Record a **baseline**: current peak-hour transactions, AOV, and repeat rate.

5. The content system (runs all 8 weeks)

Cadence: 4–5 posts/week + daily stories. Post the conversion content **on practice days, 1–2 hours before pickup/dinner.**

Recurring formats (rotate)

- 🏆 **Best Post-Practice Order** — the go-to after a game.
- 🧒 **Kid Favorite of the Week** — kids drive the snack decision.
- 📖 **First-Time Customer Guide** — what to order if you've never had Korean street food.
- 📄 **Practice Day Special** — reminder of today's bonus, with the PRACTICE code.

Rule: every post ends with a reason to *walk in* — a code, a time, or a "stop by after practice today" — not just a reason to like.

6. Week-by-week execution

WEEKS 1–2

Launch the Practice Day Special

Focus: Start the habit; get the measurement loop running.

- Launch the bonus for guests in practice attire; announce with the PRACTICE code.
- Post Practice Day Special + Best Post-Practice Order formats heavily.
- Staff log every code redemption from day one.
- **Checkpoint (end of Wk 2):** Are codes being redeemed and logged? Fix the loop before adding complexity.

KPI focus: code redemptions · post-practice-window transaction count.

WEEKS 3–4

Launch Family Bundles

Focus: Lift average order value.

- Introduce the 3 bundles; feature them in content and at the counter.
- Content shifts to bundle storytelling + Kid Favorite of the Week.
- Train staff to *offer the bundle* at the point of sale.

KPI focus: bundle attach rate · average order value vs baseline.

WEEKS 5–6

Expand what's working

Focus: Double down; stop guessing.

- Pull the numbers: which posts drove redemptions? Which bundle sells? Which code performs?
- Reallocate effort to the top formats; retire what isn't converting.
- Deploy STORY / CREATOR codes deliberately (e.g. a local sports-parent creator collab or a story-only offer).
- Optional first **small paid boost** behind the single best post.

KPI focus: cost-per-redemption by channel · repeat-visit signals.

WEEKS 7–8

Optimize on data

Focus: Lock in the tradition; decide what continues.

- Refine offers, timing, and bundle mix using 6 weeks of tracked results.
- Formalize the winning weekly rhythm as the post-campaign "new normal."
- Build the **wrap report**: lift vs baseline on all four metrics, best content, best offer, keep/kill list.

KPI focus: the four headline targets (+15% peak-hour, +10% AOV, +15% repeat, attribution live).

7. The weekly rhythm

1. **Mon:** Plan the week's posts around practice/game days; prep any offer.
2. **Tue–Sat:** Post on cadence; staff log codes at checkout.
3. **Sun (15 min):** Update the log, review leading indicators, note one thing to change.

The loop is the whole system: **post → offer → redeem → log → adjust.**

8. Compressing to 6 weeks

- **Weeks 1–2:** Practice Day Special + Family Bundles together (heavier Week 0 prep).
- **Weeks 3–4:** Expand best content + introduce STORY / CREATOR.
- **Weeks 5–6:** Optimize on data + wrap report.

Trade-off: less time to clean up the measurement loop before adding the bundle — so Week 0 setup and staff briefing matter even more.

9. Risks & adjustments

Risk	Signal	Adjustment
Codes not being logged	Redemptions implausibly low	Re-brief staff; simplify to one tally sheet
Bonus item too costly	Margin dips	Swap to a lower-cost bonus of equal perceived value
Likes, not visits	High views, flat redemptions	Rewrite CTAs to time + code; post closer to pickup
One offer outperforms	Skewed redemptions	Reallocate — don't keep funding the loser for "balance"

Bottom line

Simbongsa already has the **location**, the **customers**, and the **product**. This plan adds the missing piece: a repeatable, measurable reason for families to stop after every practice — and the tracking to prove it works.
